

Varun Trehan Evaluation for Group CMSC 436 - Recycling

Japneet Singh – I think Japneet has had a lot of experience with Ui designs and he also teaches a course at UMD about UI/UX design. So, he took charge of making the UI design for our application. I think he worked hard for it and was able to come up with some great designs. He was always there in our meetings and was easily available on text also when we needed quick changes in our design.

Soumya Jagdev- Soumya and I worked very close together in the current iteration of making the architecture of the application. I think he has had a lot of experience in computer architecture as he came up with some great points while we designed the rough architecture of the applications. He was also easily approachable and was generally able to hop whenever he was free.

As a team we were able to make a discord server too help streamline the process and for the ease of usability so we could quickly hop on a voice call and screen share . I think we 3 are on the same wavelength and will be able to work well together to finish the application.
